Introduction

Thank you for purchasing a Defcon Serialized VPCL - Combination Cable Lock to help protect your valuable computer from theft. The VPCL is a 6-foot 5-inch vinyl coated, stainless steel cable with a preset 4-digit combination lock. It attaches to your computer, monitor or projector via the VGA port by using the included pass-through video cable. This allows you to continue using the video port while protecting your computer.

Serialized Combination

The DEFCON Serialized VPCL Combination Cable lock is assigned a unique combination and serial number. The serial number and the combination for this cable lock appear on a sticker that is attached to the form at the back of this user's guide. We recommend that your IT Administrator keep the form in case the combination number is forgotten, misplaced, or lost.
Connecting the Pass-through Cable

1 Turn off your computer (if it is turned on).

2 Remove the current video cable, if there is one, from your computer.

3 Connect one end of the supplied pass-through cable to the video port on your computer and the other end to your video device.

4 Turn on your computer.

NOTE: FOR BEST RESULTS, TEST THE COMBINATION BEFORE ATTACHING THE LOCK TO YOUR COMPUTER VIA THE PASS-THROUGH CABLE. TO DO THIS:

1 Slide the combination lock onto the pass-through cable’s elongated security screws.

2 Turn the dials to disguise the combination and engage the lock.

3 Return to the combination you set.

4 Slide the combination lock off the security screws.

Securing the Cable to an Object

Select an object in the room to which you will secure your computer with the Universal Security Defcon Seralized VPCL- combination cable lock. Choose a large, heavy piece of furniture such as a table or desk, or an immovable fixture such as a closet hanging bar.
1. Wrap the looped end of the cable around part of the selected object.

   Make sure you use a part of the object that will prevent an intruder from slipping the cable off (for example, a table or desk leg with a cross bar, or a drawer handle).

2. Feed the lock through the looped end of the cable. As Shown.

Securing the Defcon Serialized VPCL to an object

Locking the Serialized VPCL
Combination Cable Lock

1 Enter the correct combination.

2 Slide the lock onto the pass-through cable’s elongated security screws. As shown in diagram.

3 Turn the dials to conceal your combination. The Defcon Serialized VPCL is now locked.
Unlocking and Removing the Defcon Serialized VPCL combination cable lock

1 Enter the correct combination.

2 Slide the combination lock off the security screws.

DEFCON PC Lock and Security Base Plate

Included with your DEFCON Serialized VPCL is the PC Lock and Security Base Plate for the security of desktop computers.

Using the DEFCON PC Lock

The PC Lock consists of a lock base, an attachment screw, and a security plate. When attached to a desktop computer, the lock provides a convenient anchorage point for your DEFCON PC Lock or a notebook computer lock. The PC Lock does not require tools for installation. However, you may want to use a screwdriver to securely fasten the lock to your computer. You can use either a Philips or flat head screwdriver. Avoid overtightening the screw as doing so may cause damage to the screw’s threading, making it difficult to remove.
Using the DEFCON Security Base Plate

1. Choose a solid location to attach the DEFCON Security Base Plate: a piece of furniture, or metal cabinet. If you plan to use the two screws, you can use the base plate as a template to pre-drill the holes.

2. Use the abrasive pad, then the alcohol wipe to prepare the area when you will attach the DEFCON Security Base Plate.

3. After the alcohol dries, remove the backing on the base plate to expose the adhesive and place it on the prepared location. If desired, secure the base with the two screws.
NOTE: When using the adhesive backing, apply at room temperature \(-60^\circ F (16^\circ C)\), and allow it to bond for more than 24 hours. Not recommend for to use in outdoor or high humidity environment. Bonding to glass, ceramic tile, water-absorbent materials, copper, brass, or plasticized vinyl without primer surface are not recommended. Targus recommends using both adhesive and screw to provide maximum security. Using only the adhesive provides marginal security.

4. Place the DEFCON Security Base Plate cover as shown and slide it to the left or right to secure it in place.

5. Insert your DEFCON cable lock.
